

# Zapper Web Developer

We are looking for a web developer that has primary experience in JavaScript. This developer's primary focus will be on developing user interface components for our web applications, integrating with the relevant back end components; as well as developing react components for the mobile space. We are looking for a team player – someone who is focused on quality delivery, team collaboration and aims to build software components that is robust and re-usable. We are looking for someone who is not afraid of a challenge, and enjoys working in a fast paced environment.

- At least 5 years' experience
- Relevant IT qualification or experience if no formal qualification
- Critical languages to have: JavaScript, React, React Native, React JS, CSS3, HTML 5
- Nice languages to have: PHP, SQL, MySQL, C, node, Sass and LESS
- Experience with common front-end tools: Gulp, Webpack, Babel, NPM
- Experience with Linux
- Ability to understand business requirements and translate them into technical requirements.
- Understand Software Development Methodologies
- It is advantageous if the developer can share their GitHub profile with any projects that demonstrate their JavaScript and react projects.

## Assessment

### **Objective:**

Create their own date picker using vanilla JavaScript and make the code available to us for review.

### **Time given:**

1 Week

**I also have some additional thoughts from the hiring team manager.**

*If someone has less than 5 years but feels like they are capable of the role we will see this in their level of development quality and effort – but the role is now more senior so I would expect the experience to be there. The main language is still JavaScript. I need this person to be across my web and react native team so that's why it is critical.*
